

# Wireless & telecom

Telecommunications is one of the fastest growing industries of our times. The development of innovative wireless technologies has brought the internet to products that never before had wireless connectivity. This means that manufacturers must bring wireless products to the market fast to keep pace with changing technology.

## Our services includes

- Pre-compliance testing
- Product testing
- Product and System certifications
- International approvals

When launching a new product, you need regulatory approvals for the specific market, country or region. We have a tailor-made industrial approach coupled with a solid project management model, serviced by encompassing and devoted people around the Nemko globe.
