

Certification to ENERGY STAR program requirements

The US Environmental Protection Agency (EPA) has implemented a third party certification scheme for the ENERGY STAR program. Nemko was one of the first agencies to be recognised by the EPA to test and certify products for ENERGY STAR qualification.

Nemko Canada can provide testing and/or certification services for numerous product categories including:

- Televisions
- Audio/Video
- Displays
- Imaging equipment
- Computers
- Enterprise servers
- Lighting products
- Data Center equipment
- Small Network equipment

Related information

Other facts about ENERGY STAR:

- ENERGY STAR qualification requires surveillance. Certification bodies will retest a minimum of 10% of their qualified products by category annually.
- In addition to having your testing performed at Nemko, test reports can be accepted from laboratories that have been qualified by Nemko Canada to the requirements of ISO 17025. Witness testing is also an option.
- Laboratories wishing to be qualified to provide test data under this Nemko Certification program must contact Nemko Canada to arrange for qualification prior to any submission of test data.
